EDUCATION

Mahindra University

B.Tech in Artificial Intelligence

Aug 2023 – Present

GPA: 8.7 / 10.0

Coursework: Data Structures and Algorithms, Java Programming, Database Management (SQL), Machine Learning, Operating Systems, Computer Vision

Awards: Academic Merit Scholarship (2x), Winner – BUIDL-A-THON (Blockchain Club MU)

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, C, HTML, CSS

Backend & APIs: Node.js, Express.js, FastAPI, REST APIs, JWT Authentication, Bun, Elysia.js

Data & Databases: PostgreSQL, MongoDB, Sequelize, Prisma ORM, Data Analysis

Cloud, DevOps & Systems: Docker, GitHub Actions, CI/CD Pipelines, Linux/UNIX, Windows PowerShell, Networking

ML & AI Engineering: PyTorch, OpenCV, XGBoost, SHAP (Model Explainability), Retrieval-Augmented Generation (RAG), Vector Databases (pgvector)

Frontend & Tools: React.js, Next.js, Git, Claude Code, Codex, Antigravity

EXPERIENCE

Joineazy

Jun 2026 – Present

Full-Stack Intern (Backend Focus) – College ERP

- Develop and deploy backend governance modules for a multi-role college ERP platform, covering schema design, API implementation, and data integrity across **Node.js**, **Express**, **Sequelize**, and **PostgreSQL** to handle a major vertical slice of the system.
- Re-engineered the relational database schema and established a disciplined **AI-augmented development workflow** (scoped implementation, diff review, containerized verification) using **Claude** and **Codex** — becoming the de facto backend architect for a multi-role, multi-tenant ERP system.

Blockchain Club, Mahindra University

Jun 2025 – Jun 2026

Vice President – Technical Education & Consulting

- Led technical consulting and education for 50+ students across 20+ competing teams, building consulting and project management skills.
- Established an industry partnership with **Cyfrin Updraft** to deliver a structured development bootcamp on professional-grade engineering practices.

PROJECTS

RiskLens – AI-Powered Pull Request Risk Intelligence Platform

Jul 2026

React, TypeScript, FastAPI, PostgreSQL, XGBoost, SHAP, pgvector, Docker

- Built an ML pipeline predicting pull request risk from historical commit and bug-fix data using an **XGBoost classifier** with **SHAP-based explainability** to surface the factors behind each risk score.
- Designed a **Retrieval-Augmented Generation (RAG)** pipeline (pgvector + embeddings) grounding AI review feedback in engineering standards, and correlated scores with **CI/CD** outcomes across a fully containerized stack.

Satellite Imagery Analysis for Power Line Corridors

Feb 2026

Python, PyTorch, OpenCV, Sentinel-2

- Built an end-to-end geospatial pipeline over **Sentinel-2** satellite imagery to detect vegetation encroachment in high-voltage corridors, fine-tuning a segmentation model on spectral and mask features to reach **F1 0.83** and **AP 0.90** on held-out data.
- Packaged the trained model into a georeferenced inference application built for porting to **ARM-based edge hardware** for in-vehicle field deployment.

SupportOps – Cross-Platform IT Diagnostics & Troubleshooting Platform

Aug 2026

Python, PowerShell, FastAPI, React, REST APIs

- Extended the open-source SysAdminToolbox into a full IT support platform, adding a **FastAPI** backend, REST endpoints, and a **React/Next.js** dashboard for real-time device, network, and service health monitoring.
- Built cross-platform diagnostics in **Python** and **PowerShell** spanning DNS, TCP/port, HTTP/TLS, and latency checks, plus a rule-based root-cause engine that correlates failures into a one-click structured support report.

ADDITIONAL

Communication: Strong verbal and written English; presented technical solutions to non-technical stakeholders.

Hobbies: Regular user of **Claude**, **Antigravity**, and **Codex** for accelerated development and code review.
